

MY PROFESSIONAL PROFILE

- R&D Design Coordinator in Electromagnetics
- Senior Technical Leader in Electromagnetic Systems, Advanced R&D, Data-Driven Engineering.
- Environment: Science and Technology Park
- Location: Tehran
- Organization: BlueSkies
- Employment Type: Full-time, Senior, Manager level

My Role

- I am a senior R&D design leader working at the intersection of electromagnetics, advanced engineering, computational modeling, and data-driven design.
- I lead technically challenging projects, coordinate multidisciplinary teams, and turn complex electromagnetic problems into practical, high-impact engineering solutions.
- I am trusted not only for my technical expertise, but also for my ability to lead people, structure difficult problems, make evidence-based decisions, and move ambitious ideas from research toward real technology.

My Technical Strength

- Deep expertise in electromagnetics and electromagnetic system design
- Advanced understanding of electromagnetic simulation and numerical methods
- Strong capability in Python, data analytics, scientific computing, and Full Wave Simulation
- Ability to connect simulation, experimentation, measurement, and data
- Design optimization and computational engineering
- Strong understanding of electrical engineering and multidisciplinary product development
- Ability to learn and apply emerging technologies quickly

My Leadership

- I lead with technical depth, clarity, curiosity, and ownership
- I coordinate engineers and researchers across disciplines, mentor talented people, communicate effectively with senior leadership, and create an environment where difficult technical problems can be solved collaboratively
- I am comfortable being both a deep technical contributor and a technical leader

My Academic & Professional Foundation

- PhD-level expertise in Electromagnetics, Electrical Engineering and Applied Physics
- I have built a strong record of:
 - High-quality R&D projects
 - Technical publications and/or patents
 - Significant engineering contributions
 - Cross-functional leadership
 - Research translated into practical technology
 - Continuous learning and professional growth

My Impact

- I am known for solving problems that are technically difficult, strategically important, and commercially meaningful.
- My work contributes to advanced products and technologies, while my leadership helps build stronger engineering teams and better R&D processes.

My Standards

- Deep technical knowledge
- World-class engineering
- Data-driven decisions
- Research that becomes technology
- Continuous learning
- Meaningful impact
