ARQ PROTOCOLS APPLICATIONS

Protocol	Typical applications	Main reason for use
Stop-and-Wait ARQ	Simple wireless sensor networks, basic point-to-point communication, educational communication systems	Simple implementation, low memory requirements
Go-Back-N ARQ	Data-link communication systems, satellite-link teaching models, HDLC-based protocols	Efficient continuous transmission when errors are relatively rare
Selective Repeat ARQ (SRP)	Wi-Fi block acknowledgment, reliable wireless links, high-delay communication systems	Retransmits only missing or corrupted frames, saving bandwidth
